Abstracts

Intra-city delivery service refers to the delivery of goods within the same city. It includes the delivery of various daily necessities, food, beverages, fresh fruits, electronic products, etc., as well as the rapid delivery of corporate and personal documents and information. With the rise of the takeaway industry, catering takeaway delivery has become an important part of intra-city delivery services. For fresh food, frozen food and other commodities that need to maintain a specific temperature, intra-city delivery services provide cold chain delivery services. Through professional refrigerated vehicles and insulation equipment, the freshness and quality of the goods during the delivery process are ensured. Intra-city delivery services can also provide collection and delivery services for express parcels. However, intra-city delivery services usually pay more attention to timeliness and flexibility, and can provide customized delivery solutions according to customer needs. Intra-city delivery services are usually able to deliver goods to the destination in a shorter time. Generally speaking, the time for intra-city delivery can be controlled within a few hours or even tens of minutes, which meets the needs of consumers and enterprises for fast delivery. Intra-city delivery services play an increasingly important role in modern urban life. With the continuous advancement of technology and the continuous changes in market demand, intra-city delivery services will continue to innovate and develop, bringing more convenience to people's lives. Catering takeaway is one of the main businesses of intra-city delivery, with the characteristics of high frequency and concentrated orders. Consumers have high requirements for delivery speed and food preservation. As consumers' requirements for fresh food quality and convenience increase, the fresh food home delivery market is gradually expanding, requiring the support of professional delivery conditions such as cold chain logistics. The delivery of daily necessities, food and beverages, household goods, etc., the delivery time is relatively flexible, but there are certain requirements for inventory management and delivery efficiency. The development of pharmaceutical e-

commerce and people's demand for the timeliness of medicines have prompted pharmaceutical delivery to become an important field of intra-city delivery, and strict requirements are placed on the safety and professionalism of delivery. Technologies such as data and artificial intelligence will be widely used to achieve accurate scheduling and optimal allocation of distribution resources, improve delivery efficiency and service quality; unmanned delivery technology continues to develop, and unmanned delivery vehicles and drones are expected to be more widely used in intra-city delivery in the future, reducing labor costs. Improvement of service quality: Consumers have higher and higher requirements for delivery services, and intra-city delivery companies will pay more attention to improving service quality, including delivery speed, service attitude, and product preservation; at the same time, providing personalized and customized delivery services will become the key to corporate competition, such as scheduled delivery, insulated delivery, and collection of payment. The same-city delivery industry will be deeply integrated with e-commerce, retail, catering, medicine and other industries to form a more complete industrial chain and ecosystem; at the same time, it will also carry out cross-border cooperation with finance, technology and other fields to expand business boundaries, innovate service models, and provide consumers with more convenient and efficient one-stop services.

The global City Delivery Service market size was estimated at USD 83860.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global City Delivery Service market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
