Abstracts

A clamp-on current sensor, also known as a current clamp or current probe, is a non-invasive electrical testing device used to measure electric current flowing through a conductor without the need for physical contact or interrupting the circuit. It operates by clamping around an insulated or uninsulated wire, utilizing the principle of electromagnetic induction to detect and measure the magnetic field generated by the current, converting this signal into a measurable electrical output?typically displayed as amperage on a multimeter, oscilloscope, or data logger. These sensors are valued for their safety, ease of use, and versatility, making them essential tools for electricians, engineers, and technicians in applications ranging from industrial maintenance and energy auditing to automotive diagnostics and renewable energy system monitoring.

The global Clamp On Current Sensor market size was estimated at USD 290.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
