Abstracts

A clamshell labelling machine is a specialized piece of industrial equipment designed to apply labels to clamshell packaging—a common type of hinged, thermoformed plastic container widely used in retail for products such as electronics, food items, cosmetics, and hardware. These machines automate the process of accurately placing adhesive labels on the flat or contoured surfaces of clamshells, ensuring consistency in positioning, adhesion quality, and readability of product information, barcodes, or branding. They are engineered to handle various label types (e.g., paper, synthetic, or transparent materials) and are often integrated into production or packaging lines to enhance efficiency, reduce manual labor, and meet high-volume output requirements while complying with industry standards for presentation and traceability.

The global Clamshell Labelling Machine market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
