Report Overview

Class I e-bikes, also known as pedal-assist electric bicycles, are defined by their electric motor that provides assistance only when the rider is pedaling, with no throttle-only operation, and a maximum assisted speed of 20 mph (32 km/h) in the U.S. These bikes are regulated similarly to traditional bicycles, allowing access to bike lanes and trails without requiring a license, registration, or insurance in most jurisdictions. The motor power typically ranges between 250W and 750W, offering a balanced blend of efficiency and performance suitable for urban commuting, recreational riding, and fitness purposes. Their design emphasizes rider engagement, as the motor seamlessly amplifies pedaling effort, making them an attractive option for those seeking a more active yet assisted cycling experience. The lack of a throttle distinguishes Class I from Class II and III e-bikes, positioning them as a middle ground between traditional cycling and higher-powered electric models. Their growing popularity is driven by increasing urbanization, environmental concerns, and demand for cost-effective, sustainable transportation alternatives.

The global Class I E Bike market size was estimated at USD 3289.36 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
