Report Overview

A clay pipe is a ceramic pipe made of clay that has the characteristic of being glazed on the inside and outside. Ceramic pipes are usually impermeable and therefore are widely used in drainage, water supply, hot water supply and other systems. The specifications of ceramic pipes are usually determined based on their inner and outer diameters, while their length can be customized as needed. The quality standards of ceramic pipes are mainly evaluated according to technical indicators such as appearance quality, dimensional deviation, water absorption, curvature, and compressive strength. The production process of pottery pipe mainly includes the steps of batching, molding, drying, glazing, and firing. The production equipment of pottery tube mainly includes ceramic roller, kiln, glaze mixer and so on. Ceramic pipe has excellent corrosion resistance, pressure resistance, high temperature resistance, and long service life, so it is widely used in various pipeline projects.
