## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CLBO Nonlinear Crystal competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. CLBO nonlinear crystals are a new type of borate nonlinear optical crystal with the chemical formula  $\text{CsLiB}_2\text{O}_7$ . They feature a wide transmittance range, a large effective nonlinear coefficient, a high laser damage threshold, and excellent phase matching properties. They are a high-performance UV nonlinear crystal developed after BBO and LBO, and are particularly suitable for frequency doubling, sum frequency generation, and optical parametric oscillation of high-power, deep-UV lasers. Global production in 2024 is expected to be approximately 6.7 tons, with an average selling price of \$10,800 per kilogram. Upstream: This primarily involves the supply of high-purity raw materials (such as cesium, lithium, and boron), the manufacture of crystal growth equipment, and the research and development of core crystal growth technologies (involving crystal structure design and growth process optimization). The technical complexity and long production cycles associated with CLBO crystal growth are factors hindering its large-scale application. Downstream: The markets ultimately served by CLBO crystals include the semiconductor industry, precision manufacturing, the medical and biological industries, and research institutions.

The global CLBO Nonlinear Crystal market size was estimated at USD 72.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
