Report Overview:

Semiconductor chamber parts cleaning lagged behind the 'Ultra-Clean Revolution' which is central in discussing all other semiconductor process inputs (i.e., gases, chemicals and silicon). Every other semiconductor process input has a Certificate of Analysis (COA) even new parts. However, recycled chamber part cleanliness varies significantly in particle levels and atomic level contamination. This is partly because standard practice used the tools themselves to perform the final cleaning of the parts. Verifying cleanliness targets was achieved by using many test wafers, expensive wafer metrology and wasted production time.

The Global Cleaning for Semiconductor and Display Equipment Parts Market Size was estimated at USD 241.71 million in 2023 and is projected to reach USD 339.01 million by 2029, exhibiting a CAGR of 5.80% during the forecast period.
