Abstracts

Cleaning metal polishes are specialized chemical formulations designed to remove oxidation, tarnish, corrosion, and surface contaminants from metal surfaces while restoring their shine and providing a protective layer against future deterioration. These products typically contain mild abrasives, surfactants, solvents, and corrosion inhibitors, and are categorized based on the type of metal they treat?such as silver, brass, copper, stainless steel, or aluminum?as well as their application method, including pastes, liquids, creams, or wipes.
