Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cleaning Pre-filming Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A cleaning and pre-filming agent is a multifunctional chemical treatment agent used after cleaning industrial equipment or circulating water systems and before full operation. It combines cleaning and film-forming functions. It further removes residual oxides and impurities on the metal surface while rapidly forming a dense, uniform protective conversion film (such as a phosphate film, silicate film, or organic composite film), effectively isolating the metal from corrosive media and preventing corrosion, scaling, and microbial growth during initial system startup. This agent is widely used in cooling water systems, boilers, and heat exchange equipment in the power, chemical, and HVAC industries. It is a key component of the complete "cleaning-pre-filming-routine maintenance" water treatment process, helping to extend equipment life, improve heat transfer efficiency, and ensure stable system operation. In 2024, the global production of cleaning and pre-filming agents will reach 81,410 tons, with an average selling price of US\$1,085 per ton.

The global Cleaning Pre-filming Agent market size was estimated at USD 88.36 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
