Report Overview
A cleanroom is a well-maintained environment with minimum levels of environmental pollutants such as aerosols, dusts, chemicals, and microbes. It has strict specifications about the number of particles per cubic meter and regarding particle size. It is typically used for manufacturing products, which require highly sterile and dust-free environment such as semiconductor, electrical and electronics, pharmaceutical, scientific research and biotechnology, and food and beverage among others.
According to the report, a key growth driver is the high requirement for contaminant-free machines and equipment. Cleanroom robots have been engineered to minimize particulate emission and are usually made of corrosive resistant materials. They are also placed below the substrate to prevent surface contamination. They have internal wiring and cabling to prevent entanglement and also subsequent particle emission. They have few mobile parts to prevent generation of particulate and dust during movements.
