This report studies the cleanroom system integration and engineering services for Electronics industry, including Semiconductor, Display & Optoelectronics, PCB, and Photovoltaic (PV).A clean room is a specially designed and constructed special closed building to control the airborne particles, temperature and humidity, cleanliness, pressure, airflow velocity and airflow distribution, noise, etc. in a certain space. The maximum allowable amount of dust particles in a certain space is also regulated according to the different levels of clean rooms, and the most commonly used norms in international standards are Fed-Std-209E and ISO-14644.In electronics industry, the cleanroom system integration and engineering services cover Cleanroom System Integration and Facility Hook Up Services.The hook up project is happening after the completion of the primary project, and clients equipment delivered to the site. Those equipment will have been connected to the pipelines so that the equipment machine could be installed and operated in accordance with the plan, which is to achieve the normal use of the process. Including electric system, PCW system, exhaust system, ROR system, NG system, vacuum system and other piping, valves, instruments and other installation and testing work.In Semiconductor, the sub main valve of the primary piping which interconnects to the secondary piping of the in-line production equipment, this secondary piping is called Hook-up.According to Semiconductor Industry Association (SIA), global semiconductor chip sales hit $627.6 billion in 2024, an increase of 19.1% compared to the 2023 total of $526.8 billion. The global semiconductor market experienced its highest-ever sales year in 2024, topping $600 billion in annual sales for the first time, and double-digit market growth is projected for 2025. Semiconductors enable virtually all modern technologies – including medical devices, communications, defense applications, AI, advanced transportation, and countless others – and the long-term industry outlook is incredibly strong. Regionally,

yearly sales were up in the Americas (44.8%), China (18.3%), and Asia Pacific/All Others (12.5%), but down in Japan (-0.4%), and Europe (-8.1%).Several semiconductor product segments stood out in 2024. Sales of logic products totaled $212.6 billion in 2024, making it the largest product category by sales. Memory products were second in terms of sales, increasing by 78.9% in 2024 to a total of $165.1 billion. DRAM products, a subset of memory, recorded an 82.6% sales increase, the largest percentage growth of any product category in 2024.The development of semiconductor cleanroom system integration is closely intertwined with the overall trends in semiconductor equipment. As Moore's Law continues to evolve, the precision and efficiency requirements for chip manufacturing have been consistently escalating, driving continuous advancements in semiconductor equipment technology. This technological progress subsequently enables sustained improvements in chip performance and cost reductions, meeting the growing demand for chip products in the digital economy era. In recent years, despite intensified global trade fluctuations, emerging market demands from artificial intelligence, new energy vehicles, and low-altitude economy sectors have maintained strong global demand for wafer fabrication plant construction. It is anticipated that in the coming years, the global semiconductor equipment industry will continue to experience rapid development, which will further propel the advancement of semiconductor cleanroom system integration.
