Report Overview:

Climate Ceilings, also known as radiant ceilings, can both be used for heating and cooling. Creating the perfect indoor climate all over the building, both in cold north sides and warm south sides at the same time, can be a challenge. Especially spring and fall with a lot of sun and cold winds can be a factor that changes the indoor climate of the building. Ceiling panels are heated in one of three ways: water pipes, electric or air flows embedded in the panel. Of these three, electric circuits and water pipes are the most used solution.
