Abstracts

Clincher bike tires are the most common type of tires used in bicycles, including road bikes, gravel bikes, and commuter bikes. They are called "clincher" because they rely on an interlocking system to secure the tire to the rim. Clincher tires consist of three main components: the tire casing, the bead, and the inner tube. The tire casing is made of rubber and provides the outer surface that comes into contact with the road. The bead is a bundle of steel wires or Kevlar strands embedded in the edges of the tire, and it hooks onto the rim to hold the tire in place. The inner tube is a separate inflatable tube that is inserted inside the tire and holds the air pressure.

The global Clincher Bike Tyres market size was estimated at USD 3872.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
