Abstracts

Clinical Trial Supply and Logistic for Pharmaceutical refers to a specialized service system providing comprehensive drug and material supply, storage, distribution, and temperature-controlled transportation throughout the entire clinical trial lifecycle for pharmaceutical companies, contract research organizations (CROs), and research institutions. This service encompasses post-manufacturing clinical packaging, labeling, kit assembly, batch traceability, global supply chain design, customs clearance, GMP/GDP-compliant warehousing, and precise distribution. With increasing trial complexity and the growth of multi-center, cross-regional clinical studies, clinical trial supply and logistics have become essential in mitigating R&D risks, improving trial efficiency, and safeguarding patient safety. Through digitalized supply chain management, intelligent temperature-control solutions, and globally compliant networks, the sector offers end-to-end, fully traceable services that accelerate the path from drug development to commercialization. The pharmaceutical clinical trial supply and logistics sector is experiencing unprecedented growth driven by shorter drug development cycles and the expansion of global clinical trial networks. The rapid advancement of precision medicine, cell and gene therapies, RNA-based drugs, and rare disease treatments is raising the bar for supply chain flexibility, traceability, and regulatory compliance. Investment in digitalized supply chain solutions, automated warehousing, and intelligent transport equipment not only enhances operational efficiency for pharmaceutical companies but also strengthens global market access. Government incentives for drug innovation and accelerated approval pathways are fostering standardized, cross-border collaboration within the industry. Key challenges include regulatory compliance costs, the complexity of international logistics, and resource allocation pressures. Strict GMP/GDP standards and cold-chain transportation requirements worldwide necessitate continuous investments in technology and skilled personnel. Cross-border trials further

complicate supply chain coordination, while geopolitical uncertainties, public health crises, and logistics capacity fluctuations heighten operational risks. Additionally, increasing demand for small-batch, multi-lot, rapid-response supply models for innovative therapies has driven up costs and supply chain agility requirements. As the global pipeline of innovative drugs expands, the demand for clinical trial supply and logistics is shifting from basic storage and transport services to comprehensive end-to-end solutions. Pharmaceutical companies, CROs, and biotech firms increasingly prioritize compliance transparency and real-time supply chain visibility to shorten development timelines and optimize resource use. Precision medicine is driving demand for biological sample logistics, companion diagnostics, and direct-to-patient (DTP) delivery, pushing the industry toward more data-driven, personalized, and customized services. The sector is set to deeply integrate with digital clinical trial platforms and decentralized trial models, becoming a strategic asset in drug R&D. The upstream supply chain comprises cold-chain technology, specialized packaging materials, transport containers, and digital management systems. Leading suppliers of cold-chain solutions and intelligent packaging continuously innovate to ensure drug stability during storage and transportation. High-performance insulation materials, smart temperature sensors, and single-use packaging have become standard in the industry. At the same time, the integration of advanced supply chain management platforms, automated warehousing systems, and tracking technologies strengthens lifecycle supply chain capabilities, ensuring secure and efficient operations for global clinical trial programs.

The global Clinical Trial Supply and Logistic for Pharmaceutical market size was estimated at USD 2360.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
