Abstracts

Clipless Cycling Shoes are designed to securely attach the rider's feet to the pedals through a cleat system, allowing for a more efficient transfer of power and better control. Instead of the traditional toe clip, these shoes use cleats that snap into compatible pedals, providing a firm connection between the shoe and the bike. Clipless shoes come with stiff soles, often made from materials like carbon fiber or reinforced nylon, to optimize energy transfer, reduce fatigue, and support long-distance rides. They are ideal for road cycling, mountain biking, and spinning, with different cleat systems (like SPD or Look) to match various pedal types.

The global Clipless Cycling Shoes market size was estimated at USD 161.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
