Report Overview

In plumbing and piping, a nipple is a fitting consisting of a short piece of pipe, usually provided with a male pipe thread at each end, for connecting two other fittings or valves. The length of the nipple is usually specified by the overall length with threads. A 'close nipple' has virtually no unthreaded area so; when screwed tightly between two female fittings, very little of the nipple remains exposed. A close nipple can only be unscrewed by gripping one threaded end with a strap wrench or by using a specialty tool known as a nipple wrench (or an internal pipe wrench) which grips the inside of the pipe, leaving the threads undamaged. When the ends are of two different sizes, it is called a reducer (or reducing nipple).
