Abstracts

Closed cell rubber sponge is a versatile elastomeric material characterized by its unique cellular structure where individual cells are completely sealed off from one another, preventing the passage of air, water, and other fluids. This structure provides excellent properties such as buoyancy, thermal and acoustic insulation, compression resistance, and environmental sealing, making it suitable for applications across industries including automotive (gaskets, seals, vibration damping), construction (weather stripping, expansion joints), marine (flotation devices), sports equipment (padding, protective gear), and HVAC (insulation). Its durability, flexibility, and resistance to moisture, ozone, and UV degradation further enhance its utility in both industrial and consumer contexts.

The global Closed Cell Rubber Sponge market size was estimated at USD 347.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
