Abstracts

Closed-cell silicone sponge is a closed-cell structural material made of silicone as the base material through a special foaming process. The bubbles inside are independent of each other and have good sealing, waterproof, heat insulation and cushioning properties. At the same time, the silicone material gives it excellent high and low temperature resistance (-60°C to 200°C), aging resistance, chemical corrosion resistance and flame retardancy. Closed-cell silicone sponge is widely used in electronics, automobiles, aerospace, construction, medical and other fields for sealing, shock absorption, heat insulation and insulation.

The global Closed Cell Silicone Sponge market size was estimated at USD 522.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
