Report Overview

In industries where workers may be exposed to radioactive substances, it is important to monitor whether their clothing is contaminated to prevent the spread of radioactive particles to other areas. The clothing monitoring machine can use sensors to detect the presence of radioactive particles on clothing and classify contaminated clothing from clean clothing. This machine may use a variety of technologies to detect radioactive contamination, including Geiger counters, scintillation detectors, or semiconductor detector. Once contaminated clothing is found, it can be removed and properly disposed of, while clean clothing can be returned to workers.
