## Abstracts

Cloud financial software for small and medium-sized enterprises is a financial management system based on the Internet and cloud computing technologies. It is delivered in the Software as a Service (SaaS) model, eliminating the need for users to install and maintain complex software programs and databases on local computers or servers. The growth of the cloud financial software market for small and medium-sized enterprises (SMEs) is primarily driven by the urgent need for cost reduction and efficiency improvement amidst the wave of digital transformation, the maturity and widespread adoption of cloud computing technology, the tightening government regulation of electronic invoicing and tax compliance, the high maintenance costs and limited flexibility of traditional on-premises financial software, and the increasing demand for real-time data collaboration capabilities driven by the trend toward remote work. This type of software, delivered through a SaaS model, provides core functions such as accounting, report generation, tax filing, invoice management, and budget control. This helps SMEs achieve financial process automation, data visualization, and regulatory compliance with a low initial investment, significantly improving financial management efficiency and decision-making support.

The global Cloud Accounting Software for SMEs market size was estimated at USD 2051.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
