Abstracts

Cloud-based Fire Safety Systems are modern fire management solutions that integrate the Internet of Things (IoT), sensor networks, and cloud computing technology. This system utilizes a dedicated gateway device to transmit real-time data from conventional fire alarm control units, smoke detectors, heat sensors, and other fire safety equipment within a building to a centralized cloud platform for storage, analysis, and management. Its core functionalities include real-time remote monitoring, proactive fault diagnostics and alerts, data analytics, and remote configuration/management. This approach enables facility managers and fire service providers to continuously assess the operational status, device health, and potential fire risks of the entire life-safety system from any location. Ultimately, this paradigm shift transforms fire safety from a reactive, compliance-driven activity into a proactive, intelligent security mechanism, significantly enhancing response efficiency and overall protection.

The global Cloud-based Fire Safety Systems market size was estimated at USD 400.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
