Abstracts

Identity and access management (IAM) in enterprise IT is about defining and managing the roles and access privileges of individual network entities (users and devices) to a variety of cloud and on-premises applications. Users include customers, partners and employees; devices include computers, smartphones, routers, servers, controllers and sensors. The core objective of IAM systems is one digital identity per individual or item. Once that digital identity has been established, it must be maintained, modified and monitored throughout each user's or device's access lifecycle. Remote Work and BYOD Trends: The rise of remote work and the Bring Your Own Device (BYOD) trend necessitate secure access to cloud resources from various devices and locations. Cloud-based IAM solutions enable secure and convenient access management for remote and mobile users. Regulatory Compliance and Data Privacy: Stringent regulatory requirements related to data privacy (e.g., GDPR, CCPA) necessitate robust IAM solutions to ensure compliance. Cloud-based IAM solutions help organizations manage user data and access rights in accordance with these regulations. Machine Learning and AI Integration: Integration of machine learning and AI into IAM solutions enhances threat detection, fraud prevention, and risk-based authentication, providing an additional layer of security and adaptability in the cloud environment.

The global Cloud-based Identity and Access Management (IAM) Solutions market size was estimated at USD 1294.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.30% during the forecast period.
