Abstracts

Cloud-Based Supercomputing Services refer to the delivery of High-Performance Computing (HPC) capabilities on demand via the internet. This model enables users to leverage the distributed infrastructure of cloud providers (such as AWS, Azure, or Google Cloud) to access massive computational clusters composed of thousands of processor cores and dedicated high-speed interconnect networks. Users can elastically acquire the immense processing power needed for complex scientific simulations, large-scale data analysis, AI training, and deep learning without the capital expenditure, maintenance, or upgrading of expensive hardware. This service paradigm significantly lowers the barrier to entry and cost of HPC, allowing for rapid deployment and flexible scaling of computing resources.

The global Cloud-Based Supercomputing Services market size was estimated at USD 820.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.
