Abstracts

Cloud crowdsourced security refers to a decentralized, on-demand cybersecurity model where organizations leverage a global community of independent ethical hackers (often called "white-hat" or "bug bounty" hackers) through a cloud-based platform to identify and report vulnerabilities in their digital assets?such as web applications, mobile apps, APIs, or networks?in exchange for monetary rewards or recognition. This approach enables continuous, scalable, and cost-effective security testing by tapping into diverse skill sets and perspectives beyond traditional in-house or outsourced penetration testing. Platforms typically provide structured programs, triage services, and tools to manage submissions, ensuring that security flaws are validated, prioritized, and remediated efficiently while minimizing legal and operational risks.

The global Cloud Crowdsourced Security market size was estimated at USD 4800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 15.40% during the forecast period.
