Abstracts

A cloud ERP system refers to enterprise resource planning software deployed based on cloud computing architecture and providing services via the Internet. It delivers core management functions such as finance, supply chain, production, human resources, and customer relations to enterprise users in a SaaS (Software as a Service) model. Driving factors in the cloud ERP system market include enterprise digital transformation and the shift from CAPEX to OPEX, as organizations replace aging on-premise systems with subscription-based, scalable platforms that reduce upfront investment and IT maintenance burden; the need for real-time visibility and integrated data across finance, supply chain, HR, CRM and manufacturing, which pushes companies to consolidate fragmented legacy tools into a single cloud backbone; and the rise of distributed and remote workforces, which makes browser/mobile-accessible ERP and secure anytime/anywhere collaboration essential. At the same time, vendor ecosystems and industry-specific cloud solutions (for manufacturing, retail, healthcare, etc.), along with regulatory pressure for better auditability and data security, further accelerate migration from traditional on-premise ERP to modern cloud ERP systems.

The global Cloud ERP System market size was estimated at USD 41250.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
