Report Overview:

Cloud Gaming BaaS is the bridge architecture between Platform-as-a-Service (PaaS) and Games-as-a-Service (GaaS). In order to create cloud-based technologies or toolsets for game development, BaaS uses SDKs (software development kits) and APIs (application programming interfaces). To power up games running on a GaaS model, BaaS features like user account and profile management, push notifications, cloud storage, social interactions, commerce, and game telemetry are made easily integrated into game applications through APIs. This greatly reduces the time and manpower required to build such services from scratch.

The Global Cloud Gaming BaaS Market Size was estimated at USD 632.33 million in 2023 and is projected to reach USD 1786.64 million by 2029, exhibiting a CAGR of 18.90% during the forecast period.
