Abstracts

Cloud gaming GPUaaS refers to providing graphics processor (GPU) resources to cloud gaming platforms as a service. Users can access and operate cloud GPU resources in real time through terminal devices (such as mobile phones, PCs, and car screens) without local high-performance hardware, and achieve smooth operation of high-definition games, 3D applications, and other content. Its core value lies in lowering the user's hardware threshold, improving resource utilization, and meeting large-scale concurrent needs through elastic expansion capabilities. The development of the cloud gaming industry can be roughly divided into three stages. In the early stage, it was the concept proposal stage. At that time, the Internet technology and hardware level were limited, and cloud gaming was only at the conceptual level. With the improvement of Internet bandwidth and the enhancement of hardware performance, it entered the technical exploration stage. Some companies began to try to develop cloud gaming technology, but due to the cost and technical maturity, it failed to be commercialized on a large scale. Until recent years, with the popularization of 5G networks and the rapid development of cloud computing technology, cloud gaming has developed rapidly. Cloud gaming is completely changing the way players around the world experience 3A-level games, so that they don't have to spend a lot of money to buy expensive computers or game consoles. Cloud gaming does not require players' hardware devices to bear the complex 3D rendering workloads that require powerful GPUs, and even low-end PCs can play easily. This is because cloud gaming uses off-site GPU servers for data processing and rendering, and players can play games smoothly with a stable network connection. There are various pricing models for cloud gaming platforms, the most popular of which is monthly subscription. Although the popularity of cloud gaming is soaring around the world, it still requires huge GPU computing power. In the field of cloud gaming, it is not the players who need to obtain a lot of GPU computing power, but the game companies and publishers.

The global Cloud Gaming GPUaaS market size was estimated at USD 1395.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.80% during the forecast period.
