## Abstracts

MLOps is the process of taking an experimental Machine Learning model into a production system. The word is a compound of 'Machine Learning' and the continuous development practice of DevOps in the software field. Machine Learning models are tested and developed in isolated experimental systems. When an algorithm is ready to be launched, MLOps is practiced between Data Scientists, DevOps, and Machine Learning engineers to transition the algorithm to production systems. Similar to DevOps or DataOps approaches, MLOps seeks to increase automation and improve the quality of production models, while also focusing on business and regulatory requirements. While MLOps started as a set of best practices, it is slowly evolving into an independent approach to ML lifecycle management. MLOps applies to the entire lifecycle - from integrating with model generation (software development lifecycle, continuous integration/continuous delivery), orchestration, and deployment, to health, diagnostics, governance, and business metrics.

The global Cloud Machine Learning Operations (MLOps) market size was estimated at USD 560.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 44.60% during the forecast period.
