Report Overview

Cloud Managed Switches has remote/cloud management function and can automatically discover wired and wireless devices that connected to a network, and then draw the network topology to enable network administrators to easily troubleshoot issues remotely.

Cloud management has a number of benefits that make it easier to build networks large and small: Automatic email alerts from power loss, downtime, excessive Layer 1 errors, or configuration changes;

Powerful remote diagnostic tools such as packet capture to help isolate and troubleshoot network issues, etc.

With cloud management, thousands of switch ports can be configured and monitored instantly over the web. Without needing a physical connection between switches, you can remotely configure them for access devices, assign voice VLANs, control PoE, and more, with just a few simple clicks and without on-site IT. By managing your network through the cloud you can provision remote sites, deploy network-wide configuration changes, and easily manage campus and distributed networks without IT training or dedicated staff.
