## Abstracts

The cloud-native data security management platform is a data security solution designed based on cloud-native architecture. It uses technologies such as containers, microservices, DevSecOps, etc. to achieve full life cycle management and security protection of data assets in dynamic data environments in the cloud, including data discovery and classification, access control, encryption and desensitization, compliance auditing and other functions, helping enterprises to efficiently ensure data security and compliance in multi-cloud or hybrid cloud environments. As a core solution for addressing enterprise cloud transformation and data compliance needs, cloud-native data security management platforms provide full-lifecycle data security assurance across multi-cloud and hybrid cloud environments through zero-trust architecture, dynamic permission control, sensitive data identification, encryption and desensitization, and real-time monitoring and early warning. Their value lies not only in enhancing enterprise defense capabilities and compliance, but also in supporting businesses in achieving "security as a service" through agile development, rapid iteration, and cross-regional deployment. With the increasing application of cloud computing, artificial intelligence, and big data, data security management platforms will evolve from single-point protection to intelligent, automated, and ecosystem-based solutions. In the future, providers should continue to focus on the following areas: First, they should strengthen the scalability and compatibility of cloud-native architectures to ensure seamless integration with mainstream cloud services and existing enterprise systems; second, they should enhance intelligent analysis and automated response capabilities, leveraging machine learning and behavioral analysis to rapidly detect and address threats; Furthermore, they should prioritize data compliance and cross-border data flow management to help customers meet evolving laws and regulations; and finally, they should foster an open and collaborative ecosystem, working with cloud service

providers, security vendors, and industry associations to promote security standards and interoperability. Only by making comprehensive arrangements in technological innovation, compliance assurance, intelligent operations and ecological collaboration can cloud-native data security management platform providers maintain their competitive advantages and achieve sustainable development in the future wave of digitalization.
