Report Overview

Cloud security is the protection of data, applications, and infrastructures involved in cloud computing. One of the biggest current applications of the cloud in healthcare is data storage. The healthcare industry works with a tremendous amount of data, and even the most sophisticated hardware installations can't handle it all. Cloud networks allow healthcare professionals to store all the data they use off-site to avoid the cost and strain of maintaining physical servers. While the need for healthcare is 24/7, certain periods like the cold and flu season require more of the healthcare provider's attention. The cloud can scale to increase or decrease data storage and traffic depending on the client's needs. Thus, healthcare providers are able to fit their network requirements to match their service demands.

The global Cloud Security in Healthcare market size was estimated at USD 7231.10 million in 2023 and is projected to reach USD 17473.66 million by 2032, exhibiting a CAGR of 10.30% during the forecast period.

North America Cloud Security in Healthcare market size was estimated at USD 2231.60 million in 2023, at a CAGR of 8.83% during the forecast period of 2024 through 2032.
