Abstracts

Cloud services are infrastructure, platforms, or software that are hosted by third-party providers and made available to users through the internet. Cloud services facilitate the flow of user data from front-end clients (e.g. users' servers, tablets, desktops, laptops—anything on the users' ends), through the internet, to the provider's systems, and back. Users can access cloud services with nothing more than a computer, operating system, and internet connectivity or virtual private network (VPN). All infrastructure, platforms, software, or technologies that users access through the internet without requiring additional software downloads can be considered cloud computing services. The Cloud Services industry can be broken down into several segments, SaaS, IaaS, PaaS, etc.
