Report Overview

High speed cameras are specialist cameras that provide highspeed image capture while maintaining resolution. These cameras generally use highend CMOS sensors and can capture more than 1000 frames per second at megapixel resolutions. Due to the large amount of data being recorded and the limited bandwidth common to most digital interfaces, these products often record onto local memory and the images are then transferred at a slower rate for later analysis in an off-line mode. The high speeds of these cameras leave little time for light collection on the sensor, so it is necessary to use high-powered lighting in order to illuminate an event.

The global CMOS High-Speed Cameras market has been broadly segmented based on design, application, and region. According to the research study, the 1,000 – 5,000 FPS segment held a significant share of the CMOS High-Speed Cameras market. In 2019, 1,000 – 5,000 FPS accounted for a major share of nearly 39% the global CMOS High-Speed Cameras market.

Asia-Pacific held a key market revenue share of the CMOS High-Speed Cameras market in 2019 which account for above 39%. The increasing adoption of CMOS High-Speed Cameras is expected to offer lucrative opportunities for vendors.

In 2019, Phantom (Vision Research), IX Camera, Mikrotron ranked top 3 of the revenue share in global market, with above 28% in 2019. These companies will witness a stable growth in the following five years.
