Report Overview

High speed cameras are specialist cameras that provide highspeed image capture while maintaining resolution. These cameras generally use highend CMOS sensors and can capture more than 1000 frames per second at megapixel resolutions. Due to the large amount of data being recorded and the limited bandwidth common to most digital interfaces, these products often record onto local memory and the images are then transferred at a slower rate for later analysis in an off-line mode. The high speeds of these cameras leave little time for light collection on the sensor, so it is necessary to use high-powered lighting in order to illuminate an event.

The global CMOS High-speed Cameras market size was estimated at USD 118.30 million in 2023 and is projected to reach USD 240.45 million by 2032, exhibiting a CAGR of 8.20% during the forecast period.

North America CMOS High-speed Cameras market size was estimated at USD 35.31 million in 2023, at a CAGR of 7.03% during the forecast period of 2024 through 2032.
