CMP Polishing Service refers to a precision polishing technique that utilizes Chemical Mechanical Polishing (CMP) to achieve a highly smooth and reflective surface finish on materials such as metals, semiconductors, and other substrates. This service employs a slurry, typically composed of abrasive particles suspended in a chemical solution, which is applied to the surface of the workpiece while it is in contact with a polishing pad. The combined mechanical action of the abrasive particles and the chemical reaction between the slurry and the workpiece material result in the removal of material in a controlled and uniform manner.
