Abstracts

CNC cladding machine is a cladding machine operated by CNC technology. It is an industrial equipment that precisely controls the cladding process through the CNC system. It combines the advantages of cladding technology and CNC technology, and can automatically and accurately complete the cladding operation according to the predetermined procedures and parameters. The working principle of the CNC cladding machine is as follows: First, place the workpiece to be clad on the workbench of the equipment and fix it with a clamp. Then, input the cladding parameters and procedures through the CNC system, including the cladding path, speed, current, voltage, etc. Next, the equipment will start automatically, the welding torch will move according to the predetermined path and parameters, and the wire feeding mechanism will send the welding wire to the welding torch for cladding. During the cladding process, the CNC system will adjust according to the real-time feedback data to ensure the quality and accuracy of the cladding.
