Abstracts

A CNC Mill-Turn Machine is a multi-functional machining tool that combines the capabilities of a CNC lathe and a CNC milling machine into a single unit. These machines can perform both turning (lathe operations) and milling (cutting, drilling, and shaping) in one setup, reducing the need for multiple machines and minimizing part handling. They are commonly used for manufacturing complex, high-precision components in industries such as aerospace, automotive, and medical device production. CNC mill-turn machines improve efficiency, accuracy, and flexibility by allowing multiple machining operations to be performed in a single cycle with automated tool changes and synchronized movements.

The global CNC Mill-Turn Machines market size was estimated at USD 894.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
