Report Overview

CNG (Compressed Natural Gas) Powered Vehicles are a type of alternative fuel vehicles that utilize compressed natural gas as their primary fuel source. These vehicles are designed to operate on CNG, which is a cleaner and more environmentally friendly fuel compared to traditional gasoline or diesel. CNG vehicles can be either dedicated CNG vehicles, which are specifically designed to run on natural gas, or bi-fuel vehicles, which can switch between CNG and gasoline. The main advantage of CNG vehicles is their reduced emissions, particularly greenhouse gases and air pollutants, making them a more sustainable transportation option. Additionally, CNG is often less expensive than gasoline or diesel, leading to cost savings for consumers. However, CNG vehicles may have a shorter range and require access to CNG refueling stations, which can be a limitation in areas with limited infrastructure.
