Abstracts

Co extruded rubber profiles are composite sealing and protection components manufactured through a simultaneous extrusion process where two or more materials?typically combining a rigid or semi-rigid plastic or metal carrier with a softer, elastomeric sealing element?are bonded together to form a single, multifunctional product. These profiles leverage the distinct properties of each material, such as the structural stability of a hard substrate and the flexibility, weather resistance, or noise-dampening qualities of rubber, to deliver enhanced performance in applications requiring durability, environmental sealing, vibration isolation, or aesthetic integration. Commonly used in automotive, construction, marine, and appliance industries, they provide solutions for door seals, window gaskets, edge trims, and protective barriers, offering advantages over single-material extrusions through improved functionality, simplified assembly, and longer service life.

The global Co Extruded Rubber Profiles market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
