Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Co-Extrusion Lamination Machine for Packaging competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Co-Extrusion Lamination Machine for Packaging production reached approximately 247 units, with an average global market price of around K US\$ 392.1 per unit. Co-Extrusion Lamination Machine for Packaging is a specialized industrial equipment designed to produce high-performance multi-layer composite packaging materials by integrating co-extrusion and lamination processes in a single production line. Its core structure includes multiple extruders, a multi-manifold or feedblock die head, a laminating station, a cooling system, and a winding unit. This structure enables the production of composite packaging materials with tailored properties (e.g., moisture resistance, oxygen barrier, puncture resistance, or heat sealability) in one step, making it widely used in the packaging industry for manufacturing high-demand products such as food packaging (e.g., retort pouches for ready meals, vacuum-sealed meat bags), medical packaging (e.g., sterile device pouches), and industrial packaging (e.g., chemical drum liners), while reducing production steps, lowering material waste, and avoiding environmental risks from solvent-based adhesives.

The global Co-Extrusion Lamination Machine for Packaging market size was estimated at USD 97.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
