### Report Overview

Co-packaged optics (CPO) refers to an advanced optical integration technology where optical components, such as lasers, modulators, and photodetectors, are directly packaged alongside high-performance electronic integrated circuits (ICs), typically within the same module or substrate. This approach minimizes electrical signal losses and latency by reducing the distance between electrical and optical interfaces, making it particularly advantageous for high-speed data transmission in data centers, AI/ML workloads, and high-performance computing (HPC) applications. Unlike traditional pluggable optics, which require separate transceivers connected via electrical traces, CPO tightly couples optics and electronics, enabling higher bandwidth density, improved power efficiency, and lower overall system costs at scale. Its adoption is driven by the growing demand for faster, more energy-efficient interconnects in next-generation networking infrastructure.

This report offers a comprehensive and in-depth analysis of the global Co Packagedoptics market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
