Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CO₂ Compressor for CCUS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global CO₂ compressors for CCUS sales reached approximately 2,570 units, with an average global market price of around 364.6 K US\$/Unit. CO₂ compressors for CCUS are core power equipment in carbon capture, utilization and storage systems, specifically designed for pressurizing, transporting and injecting captured carbon dioxide gas. These compressors must overcome the unique physical properties of CO₂ at critical states (e.g., high density, easy liquefaction, corrosiveness) through multi-stage compression, special sealing technologies and corrosion-resistant materials to achieve safe and efficient transportation of supercritical CO₂. They are widely used in carbon capture and geological storage projects at coal-fired power plants, chemical plants and oil and gas fields. From a supply chain perspective, the upstream sector includes high-end materials such as special alloy steels, anti-corrosion coatings and high-temperature seals, as well as precision components like bearings and rotors. This segment has high technical barriers and is dominated by internationally renowned material suppliers and precision manufacturing enterprises. The midstream sector covers compressor design, manufacturing and integration, involving core technologies such as aerodynamic design and rotor dynamics analysis. The global market is dominated by a few energy equipment giants, though domestic manufacturers are gradually making breakthroughs in small and medium-sized models. Downstream customers are mainly energy companies, environmental engineering firms and CCUS project operators. Demand is significantly driven by global carbon neutrality policies and carbon tax mechanisms, but faces challenges such as high energy consumption costs, long R&D cycles and extended investment return periods. Supply chain development must address material

reliability under high-temperature and high-pressure conditions, equipment scaling and modular design trends, as well as market fluctuations caused by global low-carbon policy uncertainties. Global production capacity for CO₂ compressors for CCUS in 2024 is approximately 3,000 units, with mainstream manufacturers' single production line annual capacity ranging between 80-120 units.

The global CO₂ Compressor for CCUS market size was estimated at USD 937.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
