Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CO2 Degasifier competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In municipal and industrial settings, the most common cause of acidity in water is aqueous carbon dioxide. High enough concentrations of CO2 can lower the pH levels of water to a point that corrodes pipes and machinery or harms fish grown in aquaculture. In cases where high levels of CO2 is present in water, a carbon dioxide stripping system will keep pipes intact and fish healthy. CO2 degassing systems strip the CO2 from the water, making it possible to balance the water's pH level. CO2 degasifiers, or carbon dioxide strippers, are one of the most cost-effective ways to remove CO2 from water.

The global CO2 Degasifier market size was estimated at USD 401.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global CO2 Degasifier market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
