Abstracts

Carbon dioxide fire suppression systems are non-destructive, gaseous fire protection solutions that extinguish flames primarily by reducing oxygen concentration below the level required for combustion, leveraging CO₂'s properties as a clean, electrically non-conductive, and residue-free agent. These systems are particularly effective on Class B (flammable liquids) and Class C (electrical) fires, and are commonly deployed in high-risk environments such as data centers, power generation facilities, industrial manufacturing plants, marine engine rooms, and flammable liquid storage areas, where water-based suppression could cause significant collateral damage or operational disruption.

The global Co₂ Fire Suppression System market size was estimated at USD 1150.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
