Abstracts

A CO2 galvo laser machine is a specialized industrial laser system that integrates a carbon dioxide (CO2) laser source, which emits a mid-infrared wavelength (typically 10.6µm), with galvanometer-based scanning technology for high-speed, non-contact material processing. Unlike traditional gantry-style laser systems that rely on mechanical movement of the laser head, galvo systems utilize precisely controlled mirrors mounted on high-speed motors to direct the laser beam rapidly across the workpiece, enabling significantly faster marking, engraving, cutting, and perforation operations on a wide range of non-metallic materials such as wood, acrylic, leather, textiles, plastics, ceramics, and coated metals. These machines are characterized by their exceptional speed, accuracy, and repeatability, making them ideal for applications requiring fine detail, high throughput, and minimal thermal impact, though they are generally limited to smaller working areas compared to gantry systems due to the constraints of beam deflection optics.

The global Co2 Galvo Laser Machine market size was estimated at USD 1400.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
