## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CO2 Laser Power Meter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of CO2 Laser Power Meter reached approximately 23,000 units, with an average selling price of approximately US\$8,000 per unit. CO2 Laser Power Meter is a device used to measure the optical power output of carbon dioxide lasers. It is a specialized laser power meter designed and calibrated specifically for the wavelength (typically 10.6 microns) and power range of CO2 lasers. The instrument, consisting of a sensor and display, converts laser energy into a measurable electrical signal using a sensor such as a thermopile or photodiode. This instrument is used to monitor the performance and stability of CO2 lasers in fields such as machining, medical treatment, and scientific research. The upstream core of the CO2 Laser Power Meter is comprised of suppliers of raw materials and core components, primarily thermocouple materials, high-absorptivity coating materials, alumina ceramic bases, precision resistors, water cooling units, signal amplifier chips, and instrument housings used to manufacture thermopile sensors. Its downstream applications include direct applications in industrial processing (such as power monitoring and maintenance of laser cutting and welding equipment), medical aesthetics (energy calibration of laser surgical equipment), and scientific research (laboratory optical path debugging and measurement).

The global CO2 Laser Power Meter market size was estimated at USD 184.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
