Abstracts

A CO₂ liquefaction system is a specialized industrial apparatus designed to capture, purify, compress, and cool carbon dioxide gas into a liquid state for storage, transport, or utilization, typically employing multi-stage compression, heat exchange, and refrigeration cycles to achieve the necessary pressure and temperature conditions (typically around 5.1 bar and -56.6°C for pure CO₂) while removing impurities that could affect phase stability or end-use suitability; these systems are integral to carbon capture, utilization, and storage (CCUS) infrastructure, beverage carbonation, food freezing, enhanced oil recovery, and industrial gas supply chains, with configurations ranging from small modular units to large-scale continuous plants tailored to source concentration, flow rate, and purity requirements.
