Abstracts

CO₂ mineralization technology is a carbon capture and storage (CCS) method that converts carbon dioxide (CO₂) into stable, solid minerals such as carbonates through a natural or engineered chemical reaction with minerals like calcium or magnesium. This process occurs either in situ (underground) or ex situ (in reactors) and effectively locks away CO₂ in a non-toxic, permanent form, preventing its release into the atmosphere. The technology is gaining attention for its potential to contribute to net-zero emissions goals, particularly when integrated with industrial processes that produce high CO₂ emissions, such as cement and steel production. It also offers possibilities for reuse in building materials, thus contributing to a circular carbon economy. The global CO₂ mineralization technology market is poised for significant growth. This expansion is driven by increasing regulatory pressures to reduce greenhouse gas emissions, advancements in technology, and a growing demand for sustainable industrial practices. CO₂ mineralization involves converting carbon dioxide into stable mineral forms, such as carbonates, which can be utilized in construction materials, thereby aligning with circular economy principles and offering economic benefits. North America currently holds the largest market share, attributed to strict environmental regulations and a robust industrial base, while Europe is expected to experience the fastest growth due to its commitment to achieving net-zero emissions by 2050. Despite the promising outlook, challenges such as high initial capital investments, scalability issues, and energy intensity of the mineralization process remain. However, ongoing research, technological innovations, and supportive government policies are anticipated to mitigate these challenges and further propel market growth.

The global CO₂ Mineralization Technology market size was estimated at USD 388.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.10% during the forecast period.
