Abstracts

CO₂ Pipeline Transport Service refers to the industrial logistics service that transports carbon dioxide (CO₂) from capture sources or production sites to storage, containment, or utilization sites via dedicated high-pressure pipelines. This service is widely used in carbon capture and storage (CCS), enhanced oil recovery (EOR), and industrial CO₂ distribution to ensure the safe, continuous, and efficient transport of CO₂. Its upstream includes manufacturers of CO₂ capture equipment, compression systems, and suppliers of pipes and valves; its downstream primarily serves storage site operators, oilfield development companies, industrial gas users, and related pipeline operation and management companies. With the development of global carbon neutrality and low-carbon technologies, CO₂ pipeline transport services are becoming a crucial infrastructure link in the carbon management industry chain, and their safety, stability, and cost control capabilities directly impact the operational efficiency of the entire carbon capture and utilization system.

The global CO₂ Pipeline Transport Service market size was estimated at USD 419.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
