Abstracts

CO₂ recovery unit is a kind of equipment used to recover carbon dioxide, which is widely used in industrial production, energy generation and environmental treatment. It extracts CO₂ from flue gas, industrial emissions or air through chemical absorption, physical adsorption, membrane separation or condensation, and further purifies it and uses it in the production of industrial products (e.g. carbonated beverages, chemical synthesis) or realizes sequestration to reduce carbon emissions. Inside the recovery unit, the gaseous CO₂ is cooled and compressed to produce liquid CO₂, which is then piped directly back to the dry ice pelletizer. North American market for CO₂ Recovery Unit is estimated to increase from \$ million in 2024 to reach \$ million by 2031, at a CAGR of % during the forecast period of 2025 through 2031.
